- An Australian based workforce with over 50 Consultants and Data Scientists
- Australian owned and operated since 2005
- Established skills & capabilities across a range of data and cloud technologies
- Developed, implemented and supports a number of business-critical Big Data & Analytics platforms across a range of industries and verticals

About RoZetta Technology

RoZetta, in partnership with CPT, provide Advanced Analytics capabilities leveraging leading data and cloud technologies to transform high volume, high velocity datasets into clear insights and business solutions. Through our Data Analytics as a Service Solution, we empower organisations to meet and support their digital transformation strategies through better decision making and to improve:

- Cost optimisation
- Revenue and Customer Management
- Compliance
- Risk Management

The insights we provide Customers and Partners transform and improve businesses, economies and societies. Through advanced data and analytics CPT and RoZetta enable an organization to leverage technology for business performance and success.

Data Analytics as a Service

Data Analytics as a Service is the process of assessing, aligning and developing your business strategy and drivers to your digital requirements and deliverables.

With over 20 years of building and operating large scale commercial data analytics solutions, we can assess your environments and processes, identify potential areas of risk and opportunity and map the best way forward.

We can provide in-depth expertise that you might not have in-house, or augment your current data analytics team to assist in resolving challenges or seize new opportunities. Working with your own data or as an independent broker we are able to manage a consortium of data providers to maximise the outputs for data owners and consumers.

The approach ensures business involvement at the earliest stages in the process. New business initiatives or increased volumes of existing datasets are critical components and must be included in planning and architecture decisions.

CPT and RoZetta provide Consulting Services in all aspects of data and analytics, from data discovery assessment exercises, including design and architecture, through to deployment and operation of a Data Enablement and Analytics Platform.

SERVICES AT A GLANCE

- Data Discovery
- Data Analytics Diagnostics and Assessment
- Solution Development and Architectural Design
- Advanced Analytics and Machine Learning solutions
- On-going Program and Managed Services

Data Analytics Assessment

The Data Analytics Assessment is typically the first engagement with a Client and is conducted over a period of 2 - 4 weeks depending on the scope and complexity of the client requirements and environment. The assessment is conducted as a "Fact Based" exercise and reviews areas such as Business Strategy; Data Governance; Resource Models; Data Processes and Practices; Technical Considerations and Data Availability. A fully documented audit report is presented both at a technical and business level.

Data Analytics as a Service

In a Data Analytics as a Service engagement, the Assessment is provided as a component of the overall solution. A Cloud based platform will normally deliver the most favourable return on investment for organisations to extract business value from a data analytics service. Being technology and platform agnostic, we will explore and evaluate all options in order to deliver the most appropriate solution to your business.

Additional services include:

Consulting

We can assess your environment and processes, identify potential areas of concern and opportunity and map the best way forward. With our deep expertise in design and architecture, an independent and agnostic view of technology solutions and offerings and utilising Agile methodologies to Program delivery and support, our Clients can be assured of a rapid and robust Data Analytics Solution that accelerates business efficiencies and transformation.

Data Analytics

Our Data Analytics Team can work with you to understand your business drivers; explore, assess and derive insights from your data to support fast, evidence based decision making. In addition, we can develop and build Machine Learning applications that assist in driving operational efficiency and productivity improvements.

Solutions and Apps

Whether you want to focus on data management, insights, visualisation, Internet of Things (IoT), complete platform capability from data ingestion through to analytic dashboards, Solutions can be either bespoke and custom designed or leverage existing platforms and technologies to deliver fast, actionable insights and value.
